PROFESSIONAL SUMMARY

Engineering professional transitioning into full stack development, bringing a structured debugging mindset from 2.5 years of software diagnostics at Mercedes-Benz. I build and ship full stack applications independently, from data modeling and REST API design to React frontends and treat every project as real engineering ownership.

TECHNICAL SKILLS

Programming Languages: C++, JavaScript (ES6+).

Frontend: React, React Router, Material UI, Tailwind CSS, HTML, CSS.

Backend: Node.js, Express, REST APIs.

Databases: SQLite, Firebase Firestore, Firebase Authentication.

State Management: React Hooks, Redux Toolkit.

Core Concepts: Data Structures & Algorithms, Object Oriented Programming.

Tools: Git, GitHub, POSTMAN, VS Code.

EXPERIENCE

•Software Developer

Independent Projects

March 2025 - Present

- Built and shipped multiple full stack applications with React frontends and Node.js/Express backends, integrating SQLite and Firebase for persistent data storage.
- Developed strong foundations in Data Structures and Algorithms in C++, with consistent problem solving practice.
- Designed and architected projects independently from data modeling to UI simulating real engineering ownership.
- Actively improving code quality, application structure, and debugging skills through project based learning.

•Mercedes Benz Research and Development India

Bangalore, Karnataka

Diagnostic Engineer – Software Diagnostics

August 2022 - February 2025

- Developed and maintained diagnostic software logic across multiple control units and vehicle model lines using Gradex and InDia tooling, translating complex system requirements into structured troubleshooting workflows.
- Debugged and resolved an average of 30+ field reported software issues monthly, analyzing fault codes and control unit behavior to identify root causes and implement fixes.
- Executed software flashing and configuration deployments on safety critical control units, ensuring build stability and correct system behavior post update.
- Collaborated with cross functional engineering teams to validate and deliver accurate diagnostic data, ensuring software side correctness for global service workflows.
- Authored and maintained technical documentation for diagnostic logic and deployment processes used by engineering and service teams across global markets.

PROJECTS

– Habio – Habit Tracker | [Link](#)

Tech Stack - React, Material UI, Node.js, Express, SQLite .

- * Built a full stack habit tracking app with a REST API backend and React frontend.
- * Implemented daily completion tracking using a relational SQLite schema with LEFT JOIN queries to derive checkbox state from completion records.
- * Calculated habit streaks by querying ordered completion history and walking backwards through consecutive dates.
- * Rendered a 7 day heatmap per habit built from scratch, mapping completion rows to a date grid.
- * Handled ON DELETE CASCADE so removing a habit automatically cleans up all its completion records.

– NoteNest – Full Stack Notes App | [Link](#)

Tech Stack - React, Node.js, Express, SQLite.

- * Built a full stack notes application with a REST API and persistent SQLite storage.
- * Implemented full CRUD operations with a clean React frontend and Express backend.
- * Designed a normalized database schema and REST endpoints following standard conventions.

– Syncro – Project and Task Management Web App | [Link](#)

Tech Stack - React, Redux Toolkit, React Router, Firebase (Auth + Firestore), Tailwind CSS.

- * Built a project and task management application with user authentication and real time data storage using Firebase.
- * Implemented secure auth flows (signup, login, logout, protected routes) with Firebase Auth and Redux for global state.

- * Designed a scalable Firestore data model with user scoped projects and nested tasks.
- * Enabled full CRUD operations for projects and tasks, including task completion and deletion.
- * Managed async data flows using async/await and service abstraction.
- * Ensured Redux state consistency by storing only serializable user data.
- * Built a responsive, minimal UI using Tailwind CSS.

EDUCATION

–Electronics and Communication Engineering

KLE Technological University, Hubballi, Karnataka

2018 - 2022

CGPA: 8.5/10
